Explore Division of Mixed Numbers

1 Can find the quotient of a mixed number or fraction and a mixed number, fraction, or whole number.

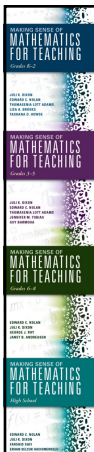

Spark Your Learning

Four friends go hiking. They bring snacks, a compass, and $3\frac{1}{3}$ quarts of water. If they share the water equally, how many quarts will each person get?

Do not use an algorithm.

Solve this:

Spark Your Learning

Four friends go hiking. They bring snacks, a compass, and $3\frac{1}{3}$ quarts of water. If they share the water equally, how many quarts will each person get?

Once you solve the problem,
think about how students in
grade 5 or 6 might solve it.

Goals for this Session

- Make sense of five culture shifts to support students to engage in mathematical practices.
- Create a shared image of classrooms where teachers are actively fighting fixed mindsets.
- Explore strategies for supporting each and every learner.

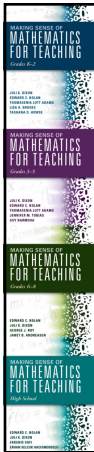

@thestrokeofluck © 2022 Juli K. Dixon

Five shifts in classroom culture

1. Students provide the strategies.
2. Teacher provides strategies "as if" from students.
3. Students create the context.
4. Students do the sense making.
5. Students talk to students.

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 1: Students provide the strategies

Teachers set the stage for students to provide the strategies.

This has the greatest return on investment if teachers have a plan for what to do with what students provide.

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 1: Students provide the strategies

Let's return to this problem:

Spark Your Learning 

Four friends go hiking. They bring snacks, a compass, and $3\frac{1}{3}$ quarts of water. If they share the water equally, how many quarts will each person get?

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 1: Students provide the strategies

I saw someone do this....

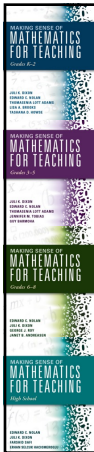

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 1: Students provide the strategies

I saw another student do this....

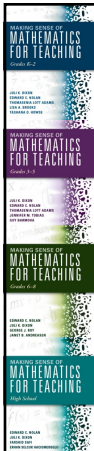

@thestrokeofluck © 2022 Juli K. Dixon

Five shifts in classroom culture

1. Students provide the strategies.
2. Teacher provides strategies "as if" from students.
3. Students create the context.
4. Students do the sense making.
5. Students talk to students.

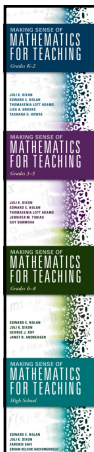

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 2: Teacher provides strategies "as if" from students

Teachers maintain control of the learning target by providing strategies "as if" they came from the students when necessary.

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 2: Teacher provides strategies "as if" from students

I saw someone do this....

$\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$

What do you think the student did next? And how would you respond?

@thestrokeofluck © 2022 Juli K. Dixon

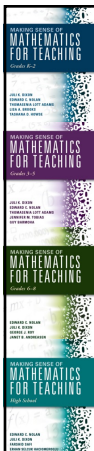

Don't underestimate...

the power of "shush" ☺

@thestrokeofluck © 2022 Juli K. Dixon

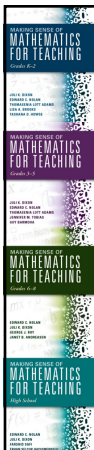

Culture Shift 2: Teacher provides strategies "as if" from students

I saw someone do this....

$\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$

"I heard someone say they added the fractions and got $\frac{2}{5}$."

@thestrokeofluck © 2022 Juli K. Dixon

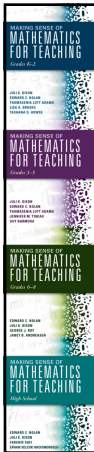

Culture Shift 2: Teacher provides strategies "as if" from students

I saw someone do this....

$\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$ $\frac{1}{2} \frac{1}{3}$

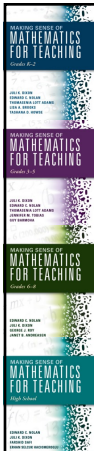

Anticipating student errors may be the most important part of anticipating student thinking.

Five shifts in classroom culture

1. Students provide the strategies.
2. Teacher provides strategies “as if” from students.
3. Students create the context.
4. Students do the sense making.
5. Students talk to students.

@thestrokofluc © 2022 Juli K. Dixon

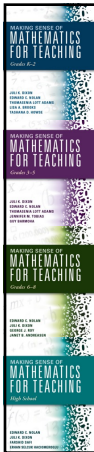

Culture Shift 3: Students create the context

Creating context helps to create meaning.

Consider these problems:

$$3\frac{1}{3} \div 4 \text{ versus } 3\frac{1}{4} \div \frac{3}{4}$$

@thestrokofluc © 2022 Juli K. Dixon

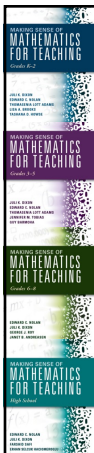

Culture Shift 3: Students create the context

$$3\frac{1}{3} \div 4$$

If four friends share $3\frac{1}{3}$ -quarts of water equally, how much of a quart will each friend get?

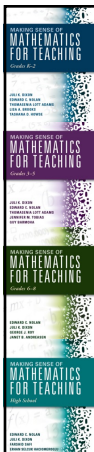

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 3: Students create the context

$$3\frac{1}{4} \div \frac{3}{4}$$

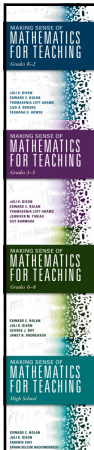

@thestrokeofluck © 2022 Juli K. Dixon

Five shifts in classroom culture

1. Students provide the strategies.
2. Teacher provides strategies "as if" from students.
3. Students create the context.
4. Students do the sense making.
5. Students talk to students.

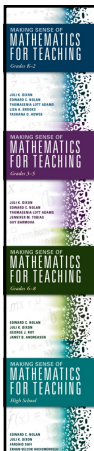

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 4: Students do the sense making

Teachers must *expect* students to do the sense making.

@thestrokeofluck © 2022 Juli K. Dixon

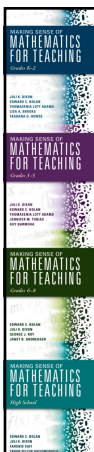

Culture Shift 4: Students do the sense making

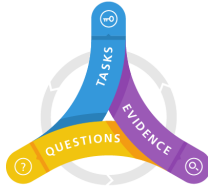

What happens when the teacher uses Gradual Release of Responsibility (I do, we do, you do)?

If the goal is for students to do the sense making, then the teacher can't demonstrate how to do the problem first!

@thestrokeofluck © 2022 Juli K. Dixon

Plan with the TQE Process in Mind

- **Tasks** connect to learning goals and help identify student errors.
- **Questions** elicit mathematical understandings and common errors.
- **Evidence** drives scaffolding and guides extensions.

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 4: Students do the sense making

Learning Goal for Grade 1:

Use strategies to add two whole numbers with sums to 20.

@thestrokeofluck © 2022 Juli K. Dixon

Plan with the TQE Process in Mind

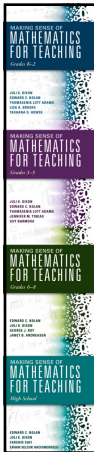

- **Tasks** connect to learning goals and help identify student errors.
- **Questions** elicit mathematical understandings and common errors.
- **Evidence** drives scaffolding and guides extensions.

@thestrokeofluck © 2022 Juli K. Dixon

Culture Shift 4: Students do the sense making

What strategies can you use to add 7 and 8?

@thestrokeofluck © 2022 Juli K. Dixon

Plan with the TQE Process in Mind

- **Tasks** connect to learning goals and help identify student errors.
- **Questions** elicit mathematical understandings and common errors.
- **Evidence** drives scaffolding and guides extensions.

Plan with the TQE Process in Mind

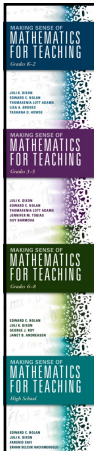

- **Tasks** connect to learning goals and help identify student errors.
- **Questions** elicit mathematical understandings and common errors.
- **Evidence** drives scaffolding and guides extensions.

@thestrokeluck © 2022 Juli K. Dixon

@thestrokeofluck © 2022 Juli K. Dixon

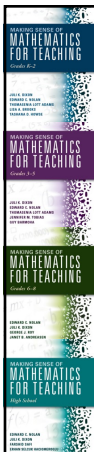

Culture Shift 5: Students talk to students

Teachers set the stage for students to talk to students.

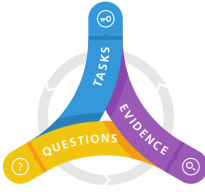

This occurs when the teacher is an active facilitator of instruction.

This takes substantial planning, so be reasonable.

@thestrokeofluck © 2022 Juli K. Dixon

Plan with the TQE Process in Mind

- **Tasks** connect to learning goals and help identify student errors.
- **Questions** elicit mathematical understandings and common errors.
- **Evidence** drives scaffolding and guides extensions.
